GEC JOURNAL OF SCIENCE & TECHNOLOGY

INDEX TO VOLUME 48, 1982

THE GENERAL ELECTRIC COMPANY, p.l.c.

INDEX

VOLUME 48, 1982

Inclusive page numbers for the year's issues are:

No. 1 ..... 1 to 48
No. 2 ..... 49 to 132
No. 3 ..... 133 to 176

PAGE

A

Algorithms and architectures for VLSI – New 68
Analysis and design of h.v.d.c. and thyristor valves: application of a digital computer program – Transient 44

B

Bandwidth compression of images using transform techniques 17
Braking system for d.c. railway traction – A regenerative 170

C

Cable link - World's largest d.c. 31
Comparison of technologies – A 76
Compression of images using transform techniques – Bandwidth 17
Computer – GEC 4090: evolution of a new 24
Computer program – Transient analysis and design of h.v.d.c. and thyristor valves: application of a digital 44
Control and protection of thyristors in the English terminal valves 135
Control – Telecommunication for h.v.d.c. 159
Control with saturated or low-reactance reactors - Static compensators using thyristor 163
Converter Station - Harmonic filters for the Sellindge 35
Cross-Channel power link 31, 32, 35, 39, 44, 135

D

Damage in optical materials at 10.6 μm – Laser 141
D.C. railway traction - A regenerative braking system for 170
Design approach to silicon integrated circuits – A 'low-risk' 56
Design for the VLSI era – Specification, description and 86
Design of high-performance integrated circuits 61
Developments in LSI production technology 90
Device characterization for VLSI – Materials and 119
Device physics – Submicrometre 108
Dry storage of irradiated nuclear fuels and vitrified wastes 152

PAGE

E

Electron beams in VLSI – Use of 103
Electronic interconnection and packaging – Modern 97

F

Filters for the Sellindge Converter Station – Harmonic 35

G

Gallium arsenide for MMICs: extending the frontiers 127
Gas turbine for industrial application: the Ruston Tornado – A 6 MW 3
GEC 4090: evolution of a new computer 24

H

Harmonic filters for the Sellindge Converter Station 35
High-performance integrated circuits – Design of 61
H.V.D.C. and thyristor valves: application of a digital computer program – Transient analysis and design of 44
H.V.D.C. control – Telecommunications for 159

I

Images using transform techniques – Bandwidth compression of 17
In other GEC publications 48, 176
Insulation co-ordination for the UK terminal 39
Integrated circuits – A 'Low-risk' design approach to silicon 56
Integrated circuits – Design of high-performance 61
Interconnection and packaging – Modern electronic 97

L

Laser damage in optical materials at 10.6 μm 141
'Low-risk' design approach to silicon integrated circuits – A 56
LSI production technology – Developments in 90

PAGE

M

Materials and device characterization for VLSI 119
Methodologies – Test 83
MMICs: extending the frontiers – Gallium arsenide for 127
Modern electronic interconnection and packaging 97

N

New algorithms and architectures for VLSI 68
Nuclear fuels and vitrified wastes – Dry storage of irradiated 152
Nuclear-generated steam for heavy-oil recovery 11

O

Optical materials at 10.6 μm – Laser damage in 141

P

Packaging – Modern electronic interconnection and 97
Power – Variable static equipment for transmission of electrical 32
Processing of semiconductor structures – Radiant-beam 112
Production technology – Developments in LSI 90
Protection of thyristors in the English terminal valves – Control and 135

R

Radiant-beam processing of semiconductor structures 112
Reactors – Static compensators using thyristor control with saturated or low-reactance 163
Regenerative braking system for d.c. railway traction – A 170
Ruston Tornado – A 6 MW gas turbine for industrial application: the 3

S

Sellindge Converter Station – Harmonic filters for the 35
Semiconductor structures – Radiant-beam processing of 112
Silicon integrated circuits – A 'low-risk' approach to 56
Silicon systems 52
Specification, description and design for the VLSI era 86

PAGE

Static compensators using thyristor control with saturated or low-reactance reactors 163
Static equipment for transmission of electrical power – Variable 32
Steam for heavy-oil recovery – Nuclear-generated 11
Storage of irradiated nuclear fuels and vitrified wastes – Dry 152
Submicrometre device physics 108
Synopses 2, 50, 134

T

Technologies – A comparison of 76
Telecommunications for h.v.d.c. control 159
Test methodologies 83
Thyristor control with saturated or low-reactance reactors – Static compensators using 163
Thyristors in the English terminal valves – Control and protection of 135
Tornado – A 6 MW gas turbine for industrial application: the Ruston 3
Traction – A regenerative braking system for d.c. railway 170
Transform techniques – Bandwidth compression of images using 17
Transient analysis and design of h.v.d.c. and thyristor valves: application of a digital computer program 44
Transmission of electrical power – Variable static equipment for 32

U

UK terminal – Insulation co-ordination for the 39
Use of electron beams in VLSI 103

V

Valves: application of a digital computer program – Transient analysis and design of h.v.d.c. and thyristor 44
Variable static equipment for transmission of electrical power 32
VLSI era – Specification, description and design of the 86
VLSI – Materials and device characterization for 119
VLSI – New algorithms and architectures for 68
VLSI – Use of electron beams in 103

W

World's largest d.c. cable link 31
